Verano, Kierstien S. BSIT-3

Capture the Flag 5: Make the System Interactive

Goal: Transform your Student Directory into an interactive application where administrators can favorite students, edit information, and remove records using Flutter interactions and state management.

Instructor Note

These activities require your own problem-solving and research skills.

DO NOT use AI to generate the code for you.

You may use AI to:

- Research what a Dart/Flutter feature does
- Understand syntax
- Explain an error (not fix your error)
- Clarify documentation

You may NOT ask AI to generate the solution/code for a flag.

🏴 Flag 0 — Create Your Feature Branch

Objective: Create a new feature branch before adding interactions.

Create:

`feature/student-interactions`

Screenshot:

- Terminal showing your current branch

```
satom@Tomilings MINGW64 ~/OneDrive - TAFE NSW/IT314AB_Verano (feature/student-li
st)
$ git status
On branch feature/student-list
Your branch is up to date with 'origin/feature/student-list'.

nothing to commit, working tree clean

satom@Tomilings MINGW64 ~/OneDrive - TAFE NSW/IT314AB_Verano (feature/student-li
st)
$ git branch
  feature/data-ui
* feature/student-list
  feature/widgets
  main

satom@Tomilings MINGW64 ~/OneDrive - TAFE NSW/IT314AB_Verano (feature/student-li
st)
$ git checkout -b feature/student-interactions
Switched to a new branch 'feature/student-interactions'

satom@Tomilings MINGW64 ~/OneDrive - TAFE NSW/IT314AB_Verano (feature/student-in
teractions)
$ git branch
  feature/data-ui
* feature/student-interactions
  feature/student-list
  feature/widgets
  main
```

🏴 Flag 1 — Wake Up the Buttons

Add at least two buttons inside each Student Card.

Example actions:

- Favorite
- Edit

Objective: Make your Student Card respond to button presses using `onPressed`.

Right now your buttons are only decorations.

Research how Flutter's `onPressed` works.

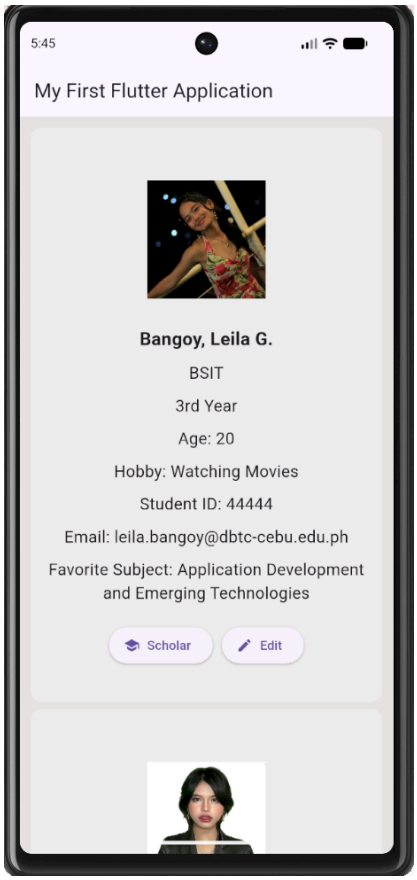
The buttons do not need to perform their final behavior yet. They simply need to respond when pressed.

Test

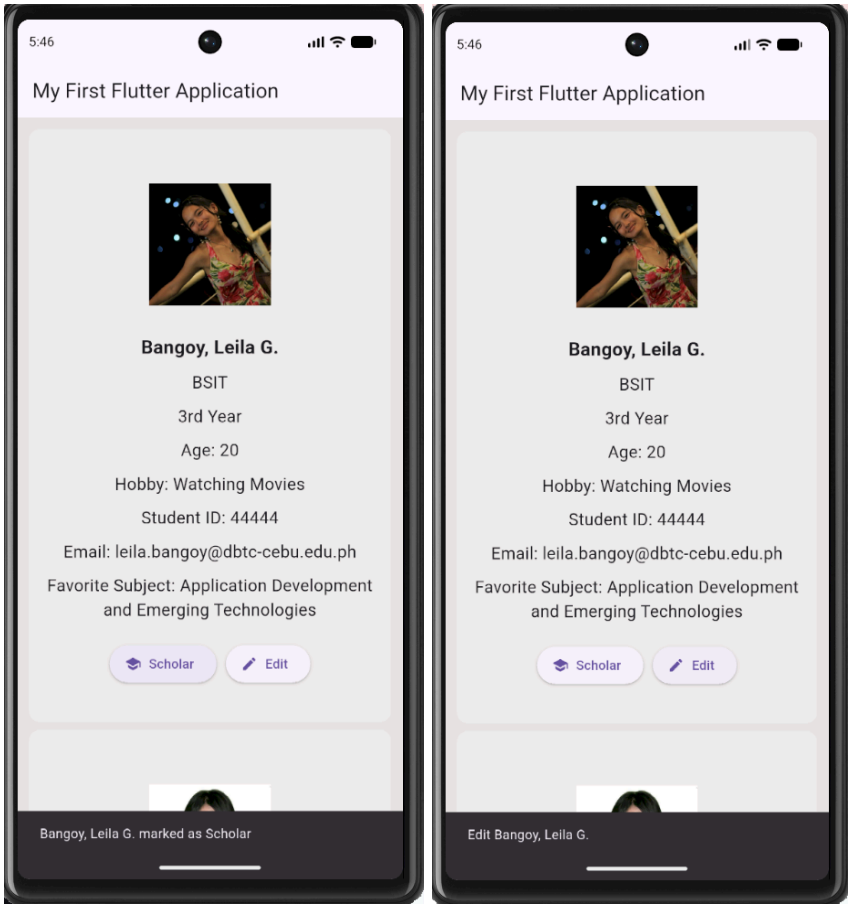
When a button is pressed, your app should visibly react in some way (such as printing a message or showing a temporary notification).

Screenshot:

- Student Card with buttons
- `onPressed` inside your code
- Button reacting or terminal message



```
182            Row(
183              mainAxisAlignment: MainAxisAlignment.center,
184              children: [
185                // scholar button
186                ElevatedButton.icon(
187                  onPressed: () {
188                    print("${profile.name} Scholar pressed");
189
190                    ScaffoldMessenger.of(context).showSnackBar(
191                      SnackBar(
192                        content: Text("${profile.name} marked as Scholar"),
193                        duration: Duration(seconds: 1),
194                      ), // SnackBar
195                    );
196                  },
197                  icon: Icon(Icons.school),
198                  label: Text("Scholar"),
199                ), // ElevatedButton.icon
200
201                SizedBox(width: 10),
202                // edit button
203                ElevatedButton.icon(
204                  onPressed: () {
205                    print("${profile.name} Edit pressed");
206
207                    ScaffoldMessenger.of(context).showSnackBar(
208                      SnackBar(
209                        content: Text("Edit ${profile.name}"),
210                        duration: Duration(seconds: 1),
211                      ), // SnackBar
212                    );
213                  },
214                  icon: Icon(Icons.edit),
215                  label: Text("Edit"),
216                ), // ElevatedButton.icon
217              ],
218            ), // Row
219
```



🏴 Flag 2 — Touch Anywhere

Objective: Make the entire Student Card tappable using `onTap`.

Buttons aren't the only interactive elements.

Research Flutter's `onTap`.

Wrap your Student Card so tapping anywhere on the card triggers an interaction.

Test

The user should be able to:

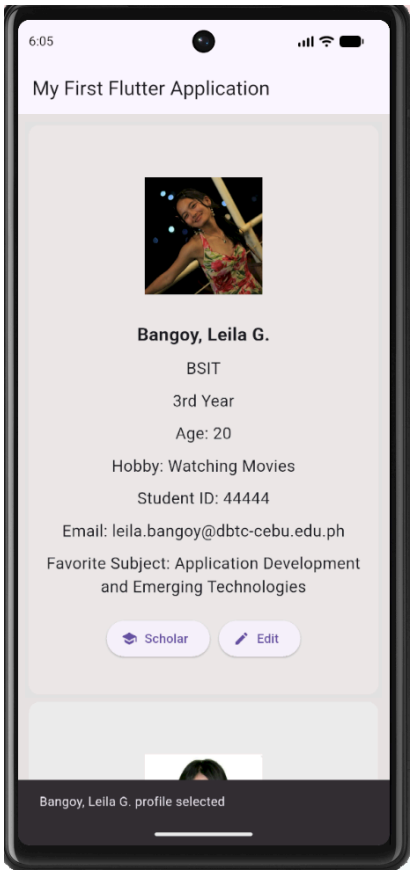
- Tap the Favorite button
- Tap the Edit button
- Tap anywhere else on the Student Card

Each interaction should be recognized separately. (One function for the 2 buttons, another for the Student Card)

Screenshot:

- `onTap` in your code
- Student Card being tapped

PS: ma’am akoa gi scholar button hereee



```
122         onTap: () {
123           print("${profile.name} profile selected");
124
125           ScaffoldMessenger.of(context).showSnackBar(
126             SnackBar(
127               content: Text("${profile.name} profile selected"),
128               duration: Duration(seconds: 1),
129             ), // SnackBar
130           );
131         },
```

🏴 Flag 3 — Discover `setState`

Objective: Update the screen immediately using `setState`.

So far your app reacts. But does the UI actually change?

Research Flutter's `setState`.

Use it so pressing a button immediately updates something visible on the screen.

Examples include:

- Changing text
- Changing an icon
- Updating a counter

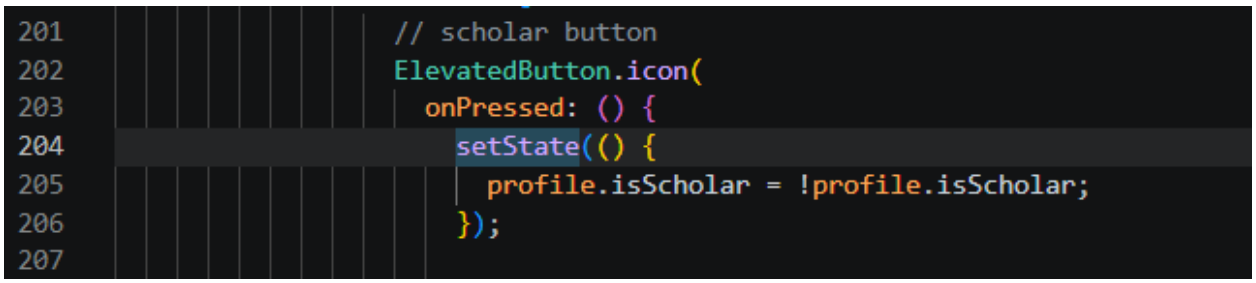
The important part is understanding that `setState` tells Flutter to rebuild the UI.

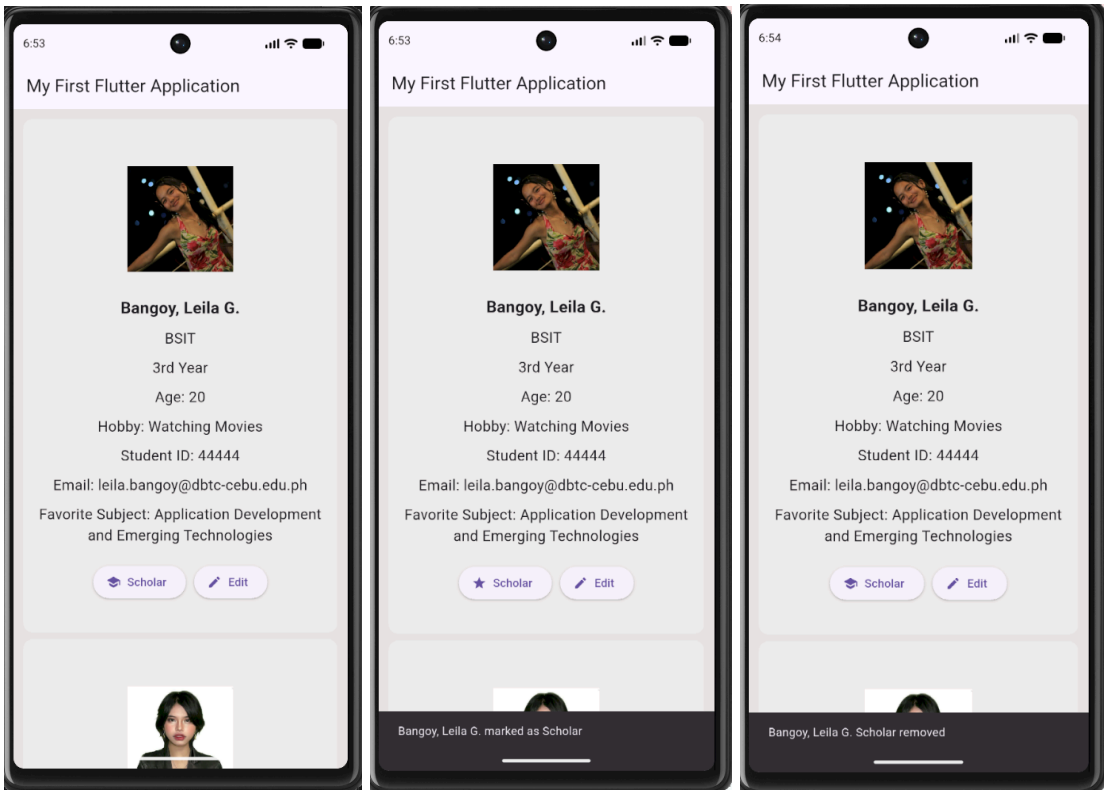
Test

The screen should visibly change immediately after pressing the button.

Screenshot:

- `setState` in your code
- Before and after interaction





🏴 Flag 4 — Favorite Students

Objective: Let administrators mark students as favorites.

Schools often need to highlight important records.

Add a favorite feature that changes a student's appearance when marked.

Possible visual changes include:

- Filled heart/star
- Different card color
- Favorite label

Each student's favorite status should work independently.

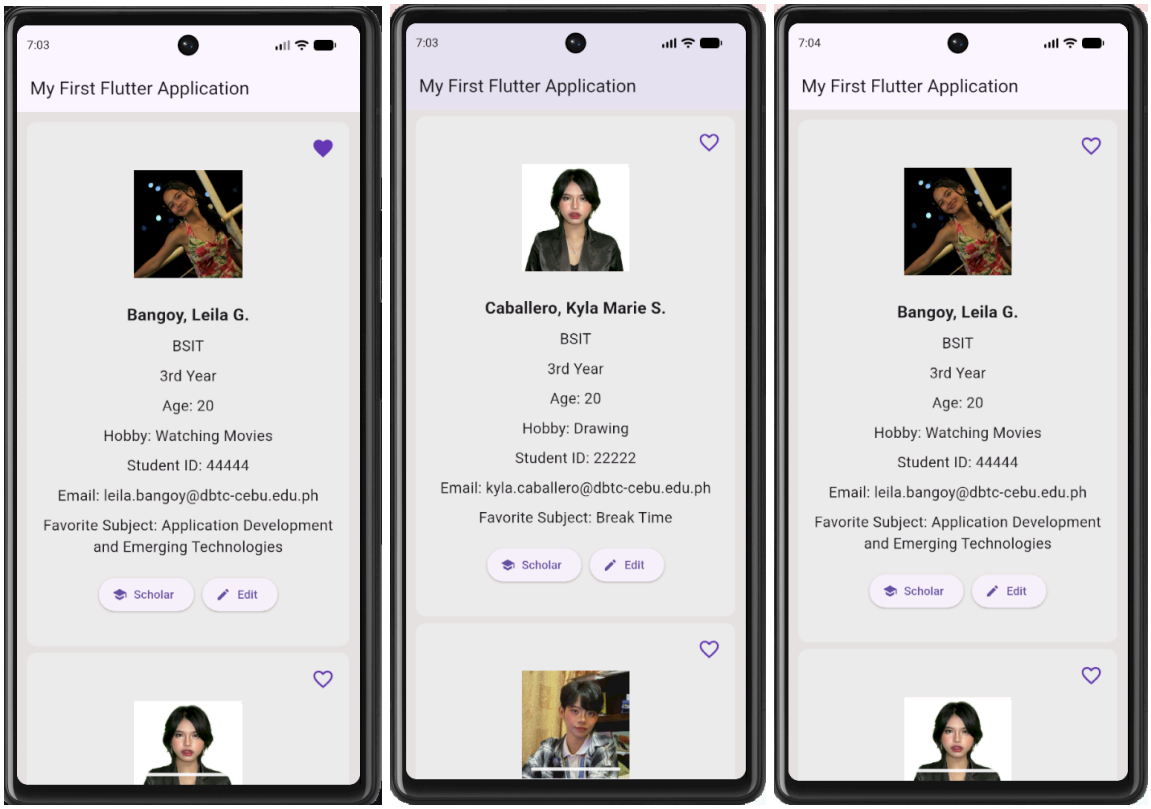
Test

- Favorite one student.
- Other students should remain unchanged.
- Favorite another student.

Both should keep their own state.

Screenshot:

- Favorited student
- Non-favorited student
- Favorite icon changing



🏴 Flag 5 — Remove a Student

Objective: Delete a student from the directory.

Research how to remove an item from a Dart `List`.

Add a Delete action that removes a student from your list.

The UI should immediately update after deletion.

Test

Before:

- Student A
- Student B
- Student C

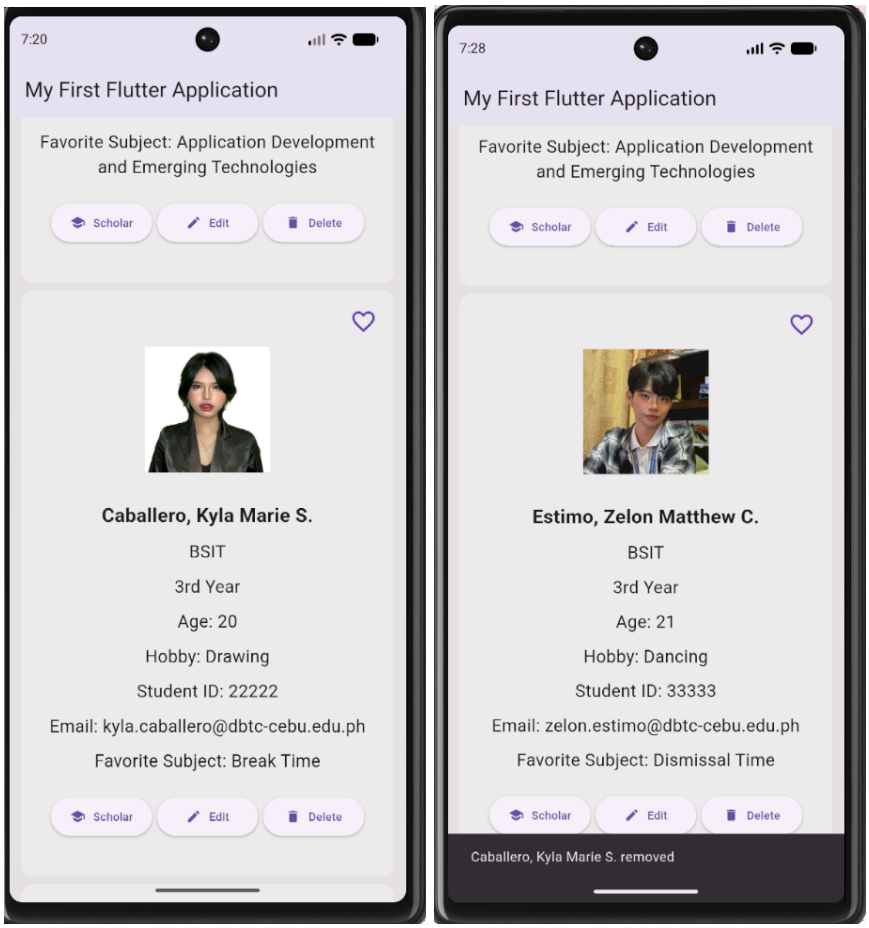
After deleting Student B:

- Student A
- Student C

No empty spaces should remain.

Screenshot:

- Student before deletion
- Student after deletion



🏴 Flag 6 — Edit Trigger

Objective: Prepare your app for editing student information.

In the next CTF you'll build a full Edit Screen.

For now, create an Edit trigger.

Research simple ways Flutter can display temporary editing interfaces.

Examples include:

- `AlertDialog`
- `SnackBar`
- Bottom Sheet

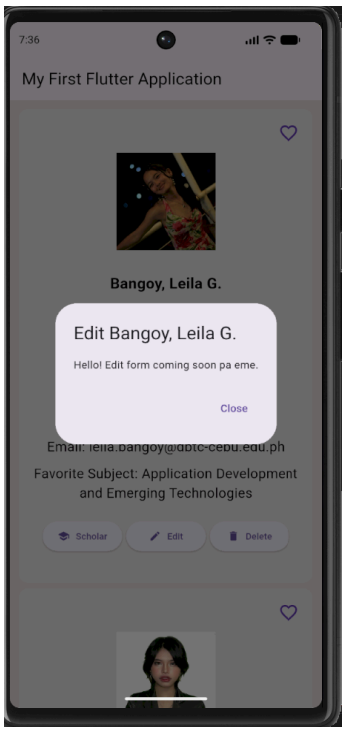
The goal is simply to launch an edit action, not build the complete editor yet.

Test

Pressing Edit should open your chosen interface.

Screenshot:

- Edit button
- Opened dialog, snackbar, or bottom sheet



```dart
// edit button
SizedBox(
  width: 105,
  child: ElevatedButton.icon(
    style: ElevatedButton.styleFrom(
      padding: const EdgeInsets.symmetric(horizontal: 6),
    ),
    onPressed: () {
      showDialog(
        context: context,
        builder: (context) {
          return AlertDialog(
            title: Text("Edit ${profile.name}"),
            content: const Text("Hello! Edit form coming soon pa eme."),
            actions: [
              TextButton(
                onPressed: () => Navigator.pop(context),
                child: const Text("Close"),
              ), // TextButton
            ],
          ); // AlertDialog
        },
      );
    },
    icon: const Icon(Icons.edit, size: 16),
    label: const Text(
      "Edit",
      style: TextStyle(fontSize: 12),
    ), // Text
  ), // ElevatedButton.icon
), // SizedBox
```

🏴 Flag 7 — Multiple Actions, Independent State

Objective: Make every Student Card manage interactions correctly.

This is your final interaction challenge.

Verify that every student behaves independently.

Example scenario:

- Favorite Student A.
- Delete Student C.
- Open Edit for Student B.

Your application should continue functioning correctly without affecting unrelated students.

Test Checklist

- Favorite works independently.
- Delete updates the list immediately.
- Edit still opens correctly.
- Remaining students keep their own states.

Screenshot:

- Multiple interactions working together
- Application still functioning normally

🏴 Flag 8 — Save Your Progress

Objective: Commit and push your completed Interactive Student Directory.

Use a proper Git commit message.

Branch:

`feature/student-interactions`

Screenshot:

- Successful commit
- Current branch
- Terminal showing the commit
